8.2 Bank reconciliation widget 29

8.3 Automatic matching 31

8.4 Foreign-currency revaluation 31

9. Control and Other Tools 32

9.1 Lock dates 32

9.2 Multiple invoice copies 33

9.3 Budgets 34

1. Overview

Odoo Community Edition ships with invoicing and basic bookkeeping, but the tools an accountant relies on every day — financial statements, asset management, bank reconciliation, follow-ups and period locking — are reserved for Odoo Enterprise. Companies on Community are left exporting data to spreadsheets or running a separate accounting package.

Odoo 20 Accounting Kit for Community removes that limitation. It brings Enterprise-style accounting into Odoo 20 Community Edition as a single, free module: a complete set of financial reports with PDF and Excel export, a full asset and deferred-revenue lifecycle, an interactive bank reconciliation widget with statement import and automatic matching, multi-level customer follow-ups, post-dated cheques, bulk and recurring payments, foreign-currency revaluation, lock dates and more.

Everything is built on standard Odoo accounting data. Journal entries, payments and reconciliations created by the kit are ordinary Odoo records, so they stay consistent with the rest of the system and remain available if the module is ever removed.

Who it is for

- Businesses running Odoo 20 Community that need proper period-end reporting without moving to Enterprise.
- Accountants and finance teams who must reconcile banks, depreciate assets, chase receivables and lock closed periods.
- Implementers who want one supported module instead of assembling many small add-ons.

2. Features at a Glance

The kit adds the following capabilities to Odoo 20 Community. Each one is explained in detail in the chapters that follow.

Area	Features
Financial Reports	• Profit and Loss and Balance Sheet, in vertical or horizontal layout • Cash Flow Statement (operating, investing and financing) • General Ledger and Trial Balance with period-comparison columns • Partner Ledger and Aged Partner Balance (receivable and payable) • Tax Report and Journals Audit • Bank Book, Cash Book and Day Book • PDF printing and Excel (XLSX) export for every report • Configurable report structure (Account Reports) and cash-flow mapping on accounts
Assets and Deferred Revenue	• Asset types (models) with default accounts and depreciation rules • Straight-line and declining depreciation, prorata temporis • Automatic depreciation board and scheduled posting • Assets and deferred revenues created automatically from bills and invoices • Pause and resume, depreciation modification, revaluation • Sale or scrap disposal with automatic gain/loss entry • Assets analysis report
Receivables	• Multi-level follow-up levels with email templates and printable letters • Follow-up report with status filters and a daily follow-up scheduler • Customer and supplier statements: PDF, Excel and email • Customer credit limits with warning and blocking amounts
Payments	• Post-dated cheques (PDC) posted on their effective date • Cheque printing with sequential numbering • Bulk payments: batch several payments into one deposit • Recurring invoices and vendor bills • Recurring journal entries (templates)
Bank	• Bank statement import: CSV, XLSX, OFX and QIF • Interactive bank reconciliation widget • Automatic matching by partner and amount, and by reconciliation models, with a scheduled auto-reconcile job • Foreign-currency revaluation with automatic reversal
Control and Configuration	• Sales, purchase and global (hard) lock dates • Multiple invoice copies with text or watermark labels • Chief Accountant access group • Anglo-Saxon accounting and fiscal-year settings

3. Installation and Setup

Requirements

- Odoo 20 Community Edition.
- Odoo modules (installed automatically): Invoicing (*account*), Sales, Check Printing, Analytic Accounting, Contacts and *base_account_budget*.
- Python packages used for Excel export and statement import: *openpyxl*, *ofxparse*, *qifparse* and *xlswriter*.

Install the Python packages

```
pip install openpyxl ofxparse qifparse xlswriter
```

Install the module

- 1 Copy the *base_accounting_kit* and *base_account_budget* folders into a directory listed in your Odoo *addons_path*.
- 2 Restart the Odoo service.
- 3 Activate developer mode, open **Apps > Update Apps List** and confirm.
- 4 Search for **Accounting Kit** and click **Activate**.
- 5 Refresh the browser. The **Accounting** application now shows the full menu: Dashboard, Customers, Vendors, Accounting, Reporting and Configuration.

Access rights

The kit uses the standard accounting groups and adds a **Chief Accountant** level between Accountant and Administrator.

Group	What it allows
Invoicing	Create and post invoices, bills and payments.
Accountant	All financial reports, asset and follow-up records, bank reconciliation, recurring entries.
Chief Accountant	Everything above plus follow-up levels, lock dates, asset types and multiple-invoice setup.
Administrator	Full access, including Settings and lock-date changes.

General settings

Open **Configuration > Settings**. The kit adds or exposes these options:

- **Customer Credit Limit** — enables credit limits on customers (see Receivables).
- **Anglo-Saxon Accounting** — records the cost of goods sold when goods are delivered.
- **Fiscal Year** — last day and month of the fiscal year, used by reports and prorata depreciation.
- **Foreign Currency Revaluation** — default journal and unrealized gain / loss accounts.

4. Financial Reports

All reports are opened from the **Reporting** menu. Each one starts with a filter wizard and can be printed as PDF or exported to Excel.

Reporting menu with all accounting reports

Common filters

Every report wizard shares the same core filters, so a report can be reproduced exactly in PDF and in Excel:

Filter	Meaning
Target Moves	All Posted Entries (default) or All Entries, which also includes drafts.
Start Date / End Date	The reporting period. Leave the start date empty to report from the beginning.
Journals	Limit the report to selected journals. All journals of the company are selected by default.
Company	The current company.

Every wizard has two buttons: **Print** produces the PDF and **Export XLSX** downloads an Excel workbook with the same figures, headings and filters.

4.1 Profit and Loss / Balance Sheet

The core financial statements. Profit and Loss compares income with expenses for a period; the Balance Sheet shows assets, liabilities and equity at a date. Both follow the structure defined in **Account Reports** (see 4.6).

Workflow

- 1 Go to **Reporting > Generic Statements > Profit and Loss** or **Balance Sheet**.
- 2 Set the period, target moves and journals.
- 3 Optionally choose the **View Format** (vertical or horizontal) and tick **Display Debit/Credit Columns**.
- 4 To compare periods, tick **Enable Comparison**, enter a column label and the comparison dates.
- 5 Click **Print** for the PDF or **Export XLSX** for Excel.

Balance Sheet

4.2 Cash Flow Statement

Shows cash coming in and going out, grouped into operating, investing and financing activities. Each account is assigned to one of these groups through its **Cash Flow type** field.

Workflow

- 1 Open **Configuration > Accounting > Chart of Accounts**, open each cash-relevant account and set its **Cash Flow type**.
- 2 Go to **Reporting > Generic Statements > Cash Flow Statement**.
- 3 Choose the period and filters, optionally enable comparison, then print or export.

Cash Flow Statement

Target Moves:
All Posted Entries

Name	Balance
Operations	₹ 0.00
Cash In	₹ 0.00
Cash Out	₹ 0.00
Investing Activities	₹ 0.00
Cash In	₹ 0.00
Cash Out	₹ 0.00
Financing Activities	₹ 0.00
Cash In	₹ 0.00
Cash Out	₹ 0.00

Cash Flow Statement

4.3 Bank Book, Cash Book and Day Book

Daily ledgers. The Bank Book and Cash Book list the movements of bank and cash accounts with running balances; the Day Book lists all entries grouped by day.

- **Display Accounts:** all accounts, accounts with movements, or accounts whose balance is not zero.
- **Sort by:** date, or journal and partner.
- **Include Initial Balances:** adds the opening balance before the start date.
- The accounts to include can be selected on the wizard.

Workflow

- 1 Go to **Reporting > Daily Reports** and choose Bank Book, Cash Book or Day Book.
- 2 Set the period, accounts, journals and display options.
- 3 Print or export.

4.4 Partner Ledger and Aged Partner Balance

The **Partner Ledger** lists every transaction and running balance per customer or vendor. The **Aged Partner Balance** splits open receivables or payables into ageing buckets so that overdue amounts stand out.

- **Partner's**: receivable accounts, payable accounts, or both.
- Partner Ledger: include reconciled entries, and show amounts in foreign currency.
- Aged Partner Balance: start date and **Period Length (days)** for each bucket (for example 30).

Workflow

- 1 Go to **Reporting > Partner Reports > Partner Ledger**, or **Reporting > Aged Partner Balance**.
- 2 Choose receivable and/or payable accounts and the options above.
- 3 Print or export.

4.5 General Ledger, Trial Balance, Tax Report and Journals Audit

The audit reports, found under **Reporting > Audit Reports**.

Report	Description and options
General Ledger	Every account with its journal items. Options: include initial balances, sort by date or by journal and partner, display accounts, and a period-comparison column.
Trial Balance	Debit, credit and balance per account. Options: display accounts, and comparison with variance columns.
Tax Report	Net base and tax amounts per tax, grouped into sales and purchases.

Report

Description and options

Journals Audit

All entries of the selected journals with tax and balance totals. Sort by date or entry number; optionally show currency amounts.

Workflow

- 1 Open the report from **Reporting > Audit Reports**.
- 2 Set the period, target moves, journals and report options.
- 3 For comparison, tick **Enable Comparison** and enter the comparison start and end dates.
- 4 Print or export.

Journals Audit

4.6 Configuring the report structure

The layout of the Profit and Loss, Balance Sheet and Cash Flow statements is data, not code. Open **Configuration > Accounting > Account Reports** to adjust it. Each line is one of four types:

- **View** — the sum of its child lines.
- **Accounts** — the balance of the accounts listed on the line.
- **Account Type** — the balance of all accounts of the selected types.
- **Report Value** — the result of another report line.

Each line also sets its sign (to show income as positive, for example) and how much detail to display.

5. Assets and Deferred Revenue

Track fixed assets from purchase to disposal and spread their cost over their useful life. The same engine recognises deferred revenue on customer invoices.

5.1 Asset types

An asset type is a template that stores the accounts, journal and depreciation rules shared by similar assets, such as vehicles or computers. Assets created from a type inherit all of its settings.

Setting	Purpose
Asset / Depreciation / Expense accounts	Where the gross value, accumulated depreciation and depreciation expense are posted.
Gain/Loss account	Receives the gain or loss when an asset is sold or scrapped.
Journal	Journal used for depreciation entries.
Computation Method	<i>Straight Line</i> : equal amounts. <i>Declining</i> : residual value multiplied by the degressive factor.
Time Method	A fixed <i>Number of Entries</i> with a period length in months, or an <i>Ending Date</i> .
Prorata Temporis	Start the first depreciation from the purchase date instead of the start of the period.
Auto-confirm Assets	Confirm assets created from bills automatically.
Group Journal Entries	Post one grouped entry per asset type instead of one per asset.

Workflow

- 1 Go to **Configuration > Accounting > Asset Types** and click **New**.
- 2 Enter the name, accounts, journal and depreciation rules.
- 3 Save. The type can now be chosen on assets, products and bill lines.

Asset types list

 The screenshot shows the 'Asset Types' configuration form for 'Computers'. The form is divided into several sections: 'JOURNAL ENTRIES', 'PERIODICITY', 'ADDITIONAL OPTIONS', and 'DEPRECIATION METHOD'. The 'JOURNAL ENTRIES' section includes fields for 'Journal' (Miscellaneous Operations), 'Asset Account' (101000 Current Assets), 'Depreciation Account' (101000 Current Assets), 'Expense Account' (600000 Expenses), and 'Analytic Account'. The 'PERIODICITY' section includes 'Time Method Based' (On), 'Number of Entries' (5), and 'One Entry Every' (12 months). The 'ADDITIONAL OPTIONS' section includes 'Auto-confirm Assets' and 'Group Journal Entries', both with checkboxes. The 'DEPRECIATION METHOD' section includes 'Computation Method' (Straight Line) and 'Prorate Temporis' with a checkbox.

Asset type form

5.2 Creating an asset and its depreciation board

An asset records the gross value, salvage value, acquisition date and depreciation rules. From these the kit computes the **depreciation board**: one line per period with the amount, cumulative depreciation and remaining value.

Asset states

State	Meaning
Draft	Being prepared; the board can be recomputed freely.
Running	Confirmed; depreciation entries are posted on their dates.
Paused	Depreciation is temporarily stopped.
Close	Fully depreciated or disposed.
Cancelled	Cancelled; posted entries are reversed, never deleted.

Workflow

- 1 Go to **Accounting > Management > Assets** and click **New**.
- 2 Enter the asset name and choose the **Asset Type**; accounts and rules are filled in from the type.
- 3 Enter the **Gross Value**, **Salvage Value** and date.
- 4 Click **Compute Depreciation** and review the **Depreciation Board** tab.
- 5 Click **Confirm**. The asset moves to *Running*: entries dated in the past are posted immediately, and later ones are set to post automatically on their dates.
- 6 Optionally click **Save as model** to create a new asset type from the asset's settings.

Asset form with depreciation board

5.3 Assets and deferred revenue from invoices

Assets do not have to be entered by hand. When a vendor bill line carries an asset type, posting the bill creates the asset automatically, linked to the bill. Customer invoice lines work the same way for **deferred revenue**: the income is recognised month by month instead of all at once.

Workflow

- 1 On the product form, set **Asset Type** (for purchases) or **Deferred Revenue Type** (for sales). This step is optional.
- 2 Create a vendor bill or customer invoice. The line's **Asset Category** is filled in from the product, or can be chosen manually.
- 3 Post the document. An asset (or revenue recognition) record is created. If the type has **Auto-confirm Assets** ticked, it is confirmed and starts depreciating right away.

The screenshot shows the 'New Assets' form for 'Computers'. The 'Confirm' button is highlighted with a red box. The 'Depreciation Board' tab is also highlighted with a red box. The form displays the following fields:

- Asset Name: Computers
- Asset Model: ?
- Reference: ?
- Date: Sep 19
- Company: YourCompany
- Gross Value: 10,000.00
- Salvage Value: 0.00
- Residual Value: 0.00
- Vendor: ?
- Invoice: ?

The 'Depreciation Board' tab shows a table with the following data:

Depreciated...	Cumulative ...	Depreciation	Residual	Linked	Posted	State of Asset
Jan 1	2,000.00	2,000.00	8,000.00			
Jan 1, 2026	4,000.00	2,000.00	6,000.00			
Jan 1, 2027	6,000.00	2,000.00	4,000.00			
Jan 1, 2028	8,000.00	2,000.00	2,000.00			
Jan 1, 2029	10,000.00	2,000.00	0.00			

The right sidebar shows a chat log with the message: 'Mitchell Admin 11:56 AM Asset/Revenue Recognition created'.

Asset Category on invoice lines

The screenshot shows the 'New Bills' form for 'Draft Bill BILL/24-25/10/0001'. The 'Draft' button is highlighted with a red box. The form displays the following fields:

- Vendor Bill: BILL/24-25/10/0001
- Vendor: Search a name or Tax ID...
- Bill Reference: ?
- Place of supply: California (US)
- GST Treatment: Unregistered Business
- Auto-Complete: Select an old vendor bill
- Bill Date: 10/11/2024
- Accounting Date: 10/11/2024
- Payment Reference: Use Bill Reference
- Recipient Bank: ?
- Due Date: 10/11/2024 or Payment Terms
- Journal: Vendor Bills in INR

The 'Invoice Lines' tab shows a table with the following data:

Product	Asset Category	Account	Analytic	Quantity	Price	Taxes	Amount
Add a line	Add a section	Add a note	Catalog				

The right sidebar shows a chat log with the message: 'Mitchell Admin - now Vendor Bill Created'.

Asset created from a vendor bill

5.4 Asset lifecycle actions

A running asset can be adjusted without losing its history. Each action is logged in the asset's chatter.

Action	What happens
Pause / Resume	Pause stops the automatic posting of future depreciation. Resume moves the remaining entries forward by the length of the pause and restarts posting.
Modify Depreciation	Change the number of depreciations, period length or ending date, with a reason. The remaining schedule is recomputed.
Modify Value	Revaluation: increase the gross value on a date against a counterpart account. A revaluation entry is posted and the remaining depreciation is recalculated.
Sell or Dispose	Choose <i>Scrap</i> or <i>Sale</i> (with the sale value and proceeds account). The kit removes the gross value, reverses the accumulated depreciation, books the proceeds and posts the gain or loss, then closes the asset.
Cancel Asset	Reverses posted depreciation entries, deletes draft ones and marks the asset as cancelled.

Workflow

- 1 Open a running asset.
- 2 Use the header buttons: **Pause**, **Resume**, **Modify Depreciation**, **Modify Value**, **Sell or Dispose** or **Cancel Asset**.
- 3 Fill in the wizard and confirm. Use the **Items** smart button to see every journal entry of the asset.

5.5 Scheduled posting and analysis

A daily scheduled action posts the depreciation that has fallen due for all running assets, so no manual period-end run is needed. The **Assets Analysis** report, under **Reporting > Management > Assets**, summarises gross value, depreciation and residual value by asset, type and date, in list, pivot and graph views.

6. Receivables: Follow-ups, Statements and Credit Limits

Tools to get paid on time: automated reminders, clear statements for customers and vendors, and limits that stop sales to customers who owe too much.

6.1 Follow-up levels

Follow-up levels define the escalation path for overdue invoices. Each level is triggered a set number of days after the due date. The number can be negative, to send a polite reminder before the due date.

- **Follow-Up Action** — the level name, such as "First reminder".
- **Due Days** — days after the due date at which the level applies.
- **Send an Email and Email Template** — email the customer, using a specific template or the default follow-up template.
- **Print a Letter** — offer a printable PDF reminder at this level.

Workflow

- 1 Go to **Configuration > Accounting > Follow-up Levels**.
- 2 Open the company's follow-up and add one line per level, in order of due days.
- 3 Save.

Follow-up levels

6.2 Follow-up report and sending reminders

The follow-up report lists customers with open invoices, their total due and overdue amounts, the next reminder date and a status: *In need of action*, *With overdue invoices* or *No action needed*. The kit remembers the last level sent to each customer, so every reminder escalates one level.

Workflow

- 1 Go to **Customers > Follow-up Reports**. Use the filters to find customers that need action.
- 2 Open a customer to review the **Invoice Details**.
- 3 Click **Send Follow-up** to email the next due level, or **Print Letter** for a PDF reminder.
- 4 The level and date are recorded on the customer and logged in the chatter.
- 5 Alternatively, let the daily **follow-up scheduler** send the due reminders automatically.

Follow-up report

6.3 Customer and supplier statements

A statement lists a partner's open (unpaid) posted invoices or bills with totals. It can be printed, exported or emailed directly from the contact.

Workflow

- 1 Open a contact from **Contacts** or **Customers > Customers**.
- 2 Open the **Customer Statement** tab (or **Supplier Statement** for vendors) to see the open documents.
- 3 Use **Print PDF**, **Print Excel**, **Sent PDF By Email** or **Sent Excel By Email**. Emails are sent to the contact's email address with the statement attached.

Balance Due:		\$36880.5																					

6.4 Customer credit limit

- **Warning Amount** — when the customer's due amount reaches it, a warning is shown on sales orders and invoices.
- **Blocking Amount** — when reached, confirming a sales order or posting a customer invoice is refused. The warning amount must be lower than the blocking amount.

- 1 Enable **Customer Credit Limit** in **Configuration > Settings**.
- 2 On the customer form, tick **Active Credit Limit** and enter the warning and blocking amounts.
- 3 When a sales order or invoice is created for this customer, the due amount and any warning are displayed. Above the blocking amount, confirmation is stopped with a message.

7. Payments

7.1 Post-dated cheques (PDC)

A post-dated cheque is received or issued today but can only be cleared on a later date. With the PDC payment method, the journal entry is dated on the cheque's **Effective Date**, so the bank balance reflects the cheque only when it actually clears. The PDC method is added automatically to every bank journal.

Workflow

- 1 Open a posted invoice or bill and click **Register Payment**.
- 2 Choose a bank journal and the **PDC** payment method.
- 3 Enter the **Cheque Reference**, **Bank Reference** and the **Effective Date**.
- 4 Create the payment. Its journal entry is dated on the effective date.

The screenshot shows a 'Pay' modal window overlaid on a 'Customer Invoice' page. The modal contains the following fields and options:

- Journal**: A dropdown menu with 'Manual Payment' selected.
- Bank**: A dropdown menu with 'PDC' selected (highlighted with a red box).
- Amount**: ₹ 1,070.00
- Payment Date**: 10/11/2024
- Effective Date**: (empty)
- Bank Reference**: (empty)
- Cheque Reference**: (empty)
- Memo**: INV/24-25/0002

At the bottom of the modal are two buttons: 'Create Payment' and 'Discard'.

The background shows the 'Customer Invoice' for 'INV/24-25/0002' with customer details and a table of invoice lines. The total amount is ₹ 1,070.00.

Post-dated cheque payment

7.2 Cheque printing

Payments that use the Check or PDC method can be printed on pre-printed cheque stock. Numbering continues from the last printed cheque of the journal.

Workflow

- 1 Select one or more payments of the same bank journal.
- 2 Click **Print Check**. Confirm the number of the first cheque if the journal does not use manual numbering.
- 3 The payments are posted and marked as sent. Use **Unmark Sent** to print them again.

7.3 Bulk payments

A bulk payment groups several payments that share the same bank journal, type (inbound or outbound) and payment method into one batch, for example a single bank deposit. The batch total is computed automatically and the batch can be printed for the bank.

Workflow

- 1 Go to **Vendors > Bulk Payments** and click **New**, or select payments in the payments list and use the **Add to Bulk Payment** action.
- 2 Choose the bank journal, type and payment method, and add the payments.
- 3 Click **Validate**: draft payments are posted, all payments are marked as sent and the batch becomes *Sent*.
- 4 Print the batch report if needed.

7.4 Recurring invoices and bills

A recurring invoice template generates customer invoices or vendor bills on a fixed schedule, such as a monthly retainer, rent or subscription.

- **Repeat Every** and **Period** — for example every 1 month.
- **Start Date** and optional **End Date**.
- **Auto Post** — post the generated documents automatically, or leave them as drafts for review.
- Template lines with product, description, quantity, price, taxes and an optional account.

Workflow

- 1 Go to **Customers > Recurring Invoices** and click **New**.
- 2 Choose *Customer Invoice* or *Vendor Bill*, the partner, the schedule and the lines.
- 3 Click **Start**. A daily scheduled action creates every document that falls due; **Generate Now** creates the due documents immediately.
- 4 Use the **Invoices** smart button to see generated documents, and **Stop** to end the schedule.

7.5 Recurring journal entries

Recurring templates post the same journal entry at regular intervals, such as a monthly accrual or depreciation of a prepaid expense.

Workflow

- 1 Go to **Customers > Recurring Templates** and click **New**.
- 2 Enter the name, journal, debit and credit accounts, amount, optional partner and analytic account.
- 3 Set the starting date, **Recurring Period** and **Recurring Interval**, and choose **Generate Journal As** Unposted or Posted.
- 4 Set the template to *Running*. A daily scheduled action creates each due entry once; the **Next Schedule** date shows when the next one will be created.

8. Bank: Import, Reconciliation and Revaluation

Bring bank statements into Odoo, match them against invoices and payments, and revalue foreign-currency balances at period end.

8.1 Importing bank statements

Statements can be imported from the file formats most banks provide:

Format	Notes
CSV	Columns are recognised by their headers: date, label (name, description or reference), amount, partner, and optional starting and ending balance. Common date formats and currency symbols are handled.
XLSX	First sheet, from row 2: column A label, B amount, C date, D partner (optional).
OFX	Transactions, payees and the ledger balance are read from the file.
QIF	All accounts and transactions in the file are imported.

Partners are matched by exact name. For CSV and XLSX files, an unknown partner name stops the import with a message, so create the partner first.

Workflow

- 1 On the **Accounting Dashboard**, find the bank journal card and click **Import**.
- 2 Upload the statement file and confirm.
- 3 The imported statements and their lines appear in the bank journal, ready to reconcile.

Import button on the bank journal

Import wizard

Accounting Dashboard Statements				
Reference	Date	Journal	Starting Balance	Ending Balance
☐ Bank - 2023-01-01/1	01/01/2023	Bank	\$ 0.00	\$ 6,378.00
☐ Bank:2023-04-21/3	06/19/2022	Bank	\$ 1,000.00	\$ 0.00
☐ Bank:2023-04-14/1	01/15/2022	Bank	\$ 0.00	\$ 1,000.00

Imported bank statements

8.2 Bank reconciliation widget

The reconciliation widget matches each bank transaction with the invoice, bill or payment it settles, or books it directly to an account (bank fees, for example). Transactions are shown as cards with a *Matched* badge once they are reconciled.

Workflow

- 1 On the **Accounting Dashboard**, click to **Reconcile** on the bank or cash journal card.
- 2 Select a transaction on the left. The widget opens on the right.
- 3 In **Match Existing Entries**, click the open journal item that corresponds to the transaction; or in **Manual Operations**, choose the account, partner, taxes and label to book it directly.
- 4 Click **Validate**. The transaction is reconciled and marked *Matched*.
- 5 Use **Reset** to undo a reconciliation, and **To Check** / **Set as Checked** to flag transactions that need review.

Reconcile button on the dashboard

The screenshot shows the Bank Reconciliation screen with a purple header bar. Below the header is a search bar and a 'New' button. The main content area is a table of transactions to be reconciled. The table has columns for date, description, and amount. Some transactions are marked as 'Matched' with a green checkmark.

9. Control and Other Tools

9.1 Lock dates

Lock dates protect closed periods from changes.

Lock date	Effect
Sales Lock Date	No customer invoices can be created or modified up to this date.
Purchase Lock Date	No vendor bills can be created or modified up to this date.
Lock Everyone	A hard lock: no user can post or change entries up to this date. Use it to close a fiscal year.

Workflow

- 1 Go to **Accounting > Actions > Lock Dates** (Chief Accountant).
- 2 Enter the dates to apply.
- 3 Click **Update**. Only accounting Administrators can apply lock dates. Any posting inside a locked period is then refused.

Lock Dates wizard

Lock dates applied

Posting refused in a locked period

9.2 Multiple invoice copies

Print several labelled copies of an invoice in one PDF, for example "Original", "Duplicate" and "Triplicate". The label is printed as text or as a watermark.

Workflow

- 1 Go to **Configuration > Accounting > Journals** and open the sales journal.
- 2 In the **Advanced Settings** tab, add the copy names in order.
- 3 Choose the **Display Type** (text or watermark), the text position (header, footer or body) and, for the body, the corner and alignment.
- 4 Click **Configure Copy Layout** for a live preview, then save.
- 5 Print an invoice of this journal: one copy is produced per copy name.

9.3 Budgets

Budget management is provided by the companion module *base_account_budget*, installed together with the kit. Budgets are defined per analytic account and period and compared with the actual amounts posted.
